The Challenges and Issues of Sustainability in the Hospitality and Tourism Industry

Aim & Scope

The book aims to gather case studies, research papers, posters, presentations, and data related to sustainability issues and challenges. Results and conclusions can be shared with Industry professionals to curb the carbon footprint. Learning derived from the research can be utilized for sensitizing the community to responsible tourism practices.

About the book

The hotel industry's pollution and inefficient waste management have seriously damaged the ecosystem and wildlife. Due to its massive carbon dioxide and trash emissions, the hospitality sector has played a role in climate change. Also, it requires considerable amounts of water and energy. Climate Change, natural resource use, waste production, water pollution, deforestation, overfishing, ocean acidification, and air pollution are the top environmental sustainability issues that need to be addressed. In the hospitality sector, the judicious use of a resource to prevent depletion or damage—is crucial. The success of hospitality firms rests on their ability to protect the cultural and natural landmarks that draw travellers to their locations
