AIM & SCOPE

Among the scientific community, blockchain and AI are seen as a promising combination that will transform the production and manufacturing industry, media, finance, insurance, e-government, etc. Nevertheless, there is no consensus with schemes or best practices that would specify how blockchain and AI should be used together. Combining blockchain mechanisms and artificial intelligence is still a particularly challenging task. This book series is devoted to promoting the investigation of cutting-edge blockchain technology, to exploring the latest ideas, innovations, guidelines, theories, models, technologies, applications and tools of blockchain and AI for the industry, and to identifying critical issues and challenges that researchers and practitioners must deal with in future research. We want to offer researchers and practitioners the opportunity to publish their developments in this area.

Technologies and Techniques

1. Key and innovative theories, methodologies, schemes and technologies of blockchain and AI
2. Architectures and platforms for blockchain and AI
3. Blockchain and AI for Big Data
4. Blockchain and AI for Multi-Agent systems
